Customised productions in accordance with customer wishes:

Didn't find the spill bund size you wanted?
Then we would be happy to offer you a spill bund according to your specifications. Write to us or call us.

All side walls can be folded up individually. Therefore, the spill bund can be loaded and unloaded from each side.

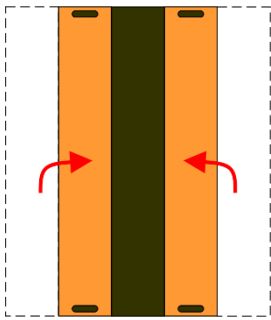

OTTER-Cargo Type C1270x870
loaded with an EUR pallet 1200x800 mm over the narrow side wall.

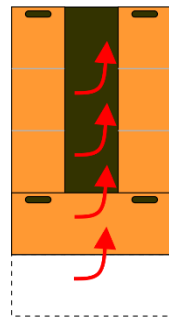

OTTER-Cargo Type C1270x870
loaded with EUR pallet in combination with pallet frames.

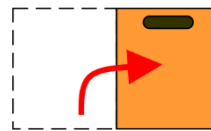

Folding map

Fold in the side walls.

Fold in every segment.

Fold up.

The handles are on top of each other.

OTTER-Cargo spill bunds need no bag. The way, they are folded positions the handles for a comfortable carrying.

Materials

Tarpaulin material: Polyester fabric coated with soft PVC on both sides, 680 g / m².

Locking: stainless steel and cramps
PVC hard

Basic materials from Europe
Made in Europe

Construction

Base: tarpaulin double-layered

Side walls: double-layered, PVC plates are welded in the middle.

No carrying ropes.

Because open containers must not be transported when they are full, our spill bunds are not equipped with carrying ropes.

Installation time

The spill bunds are ready to use in less than 2 minutes.

Chemical resistance

PVC has a very good chemical resistance. With a few substances, plasticizer losses may occur.

Maintenance and storage

After each use, the spill bund must be checked for mechanical damages and losses in plasticizer (embrittlement).

The spill bunds are to be stored clean and dry.

Repairs

Repairs must be carried out professionally. Pieces of tarpaulin (patches) are applied with hot air or high frequency. The tarpaulin patches are available from us.

The gluing of tarpaulin patches is **not** permitted!

OTTER-Original

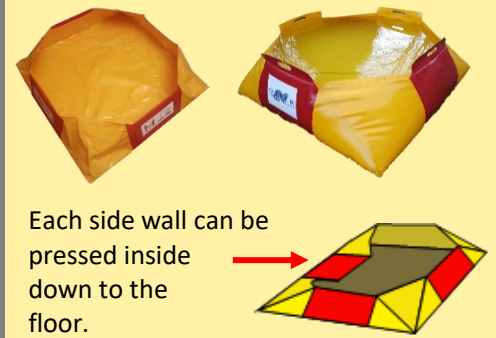

- operational within seconds
- no annoying metallic parts
- 11 different sizes available
- the most used spill bund for operations

OTTER-Cargo

- each side wall individually foldable
